DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of claims 17-23 in Paper No. 9 is acknowledged.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 17, 22 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Semichon et al., hereinafter Semichon (U.S. Patent 3,739,243) in view of Suzuki et al., hereinafter Suzuki (U.S. Patent 4,200,877).

Semichon discloses in figure 3 a diode comprising a semiconductor substrate arranged between a first electrode 1 and a second electrode 5, with rectifying contacts between the electrode and layers 4 and 2; and first, second, and third regions; 2, 4 and 3, respectively, wherein the third region is more weakly doped than the second region and is between the second region and the second electrode. Furthermore, all regions are of the same conductivity type.

Semichon does not disclose the first region 2 forms an ohmic transition with the first electrode (it is not heavily doped).

Art Unit: 2814

Suzuki teaches the concentration of regions of a diode correspond to their resistivity. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to change the concentration of the first region of Semichon structure in order to adjust the resistivity of the layer.

Allowable Subject Matter

4. Claims 18-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter:

The primary reason for indication of allowability of claims 18-21 is inclusion therein that of the limitations of: the breakdown voltage between the second electrode and the third zone is at least three times as great as a breakdown voltage between the second electrode and the second zone (claim 18); the second electrode covers the second zone in a hat shape (claims 19 and 20); and an insulating layer (claim 21).
